

EyeSite for Windows – First-Time Users

1. Before using the EyeSite Windows Application to change your device's default font, please ensure that you have taken the EyeSite vision examination.

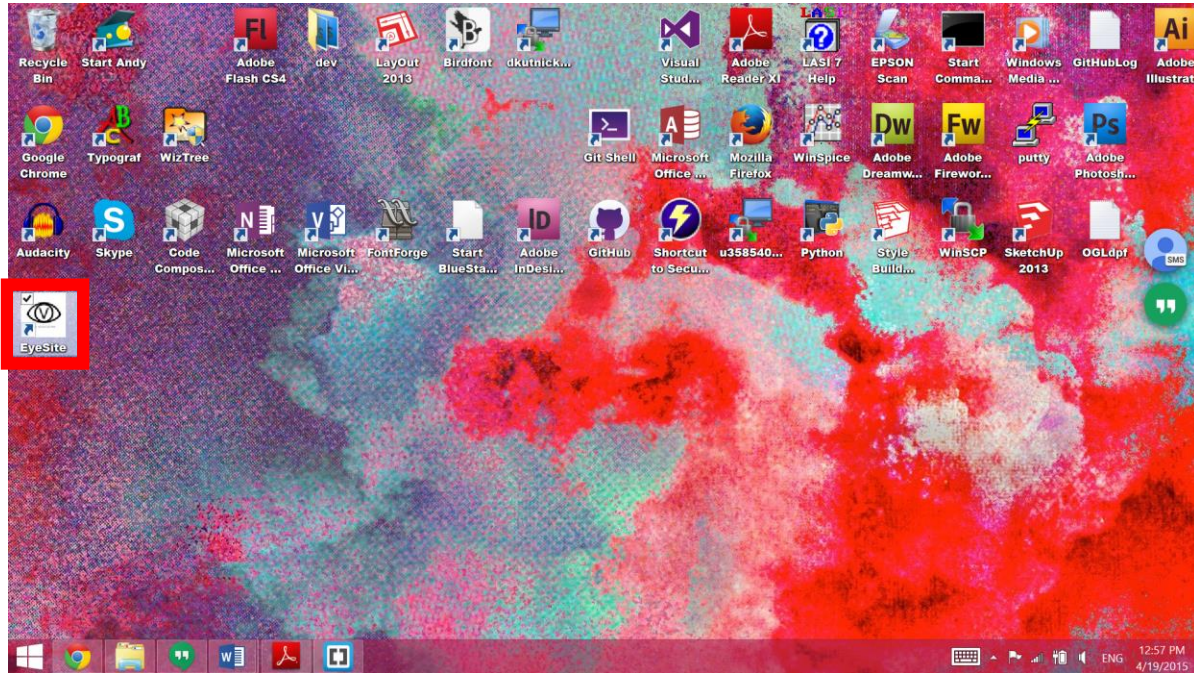

http://thevisionaries.tk/vision_test.php

2. Locate your vision examination score results. These are shown at the end of the vision examination.
3. Use the EyeSite install package to install the EyeSite Windows application on your computer. Select the options outlined in red.

4. Open the EyeSite Application shortcut, which is now located on the desktop of your computer.

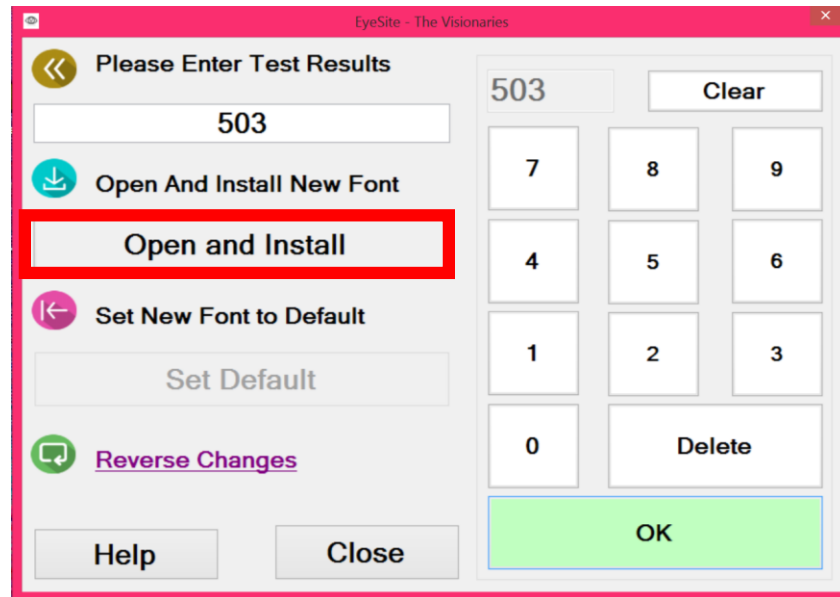

5. Once you have located your vision examination results, enter your results into the Windows application.

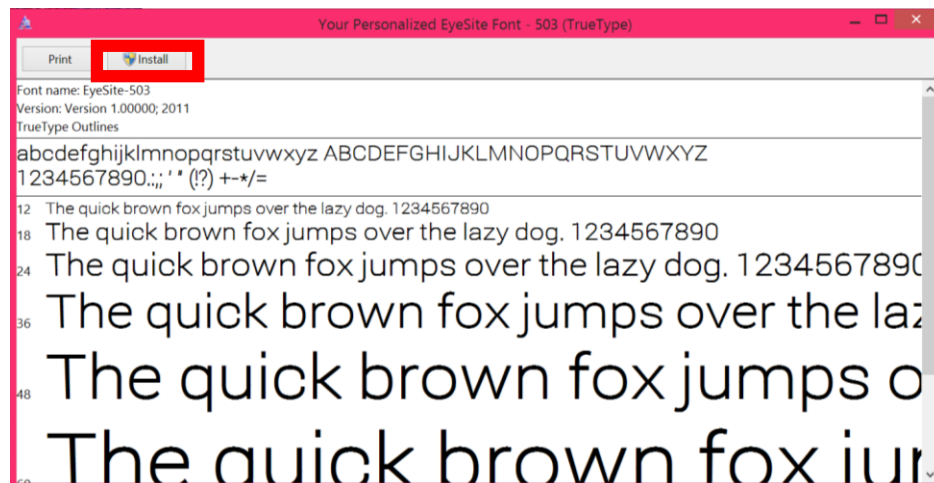

6. After entering your vision examination results into the application, click on “Open and Install”

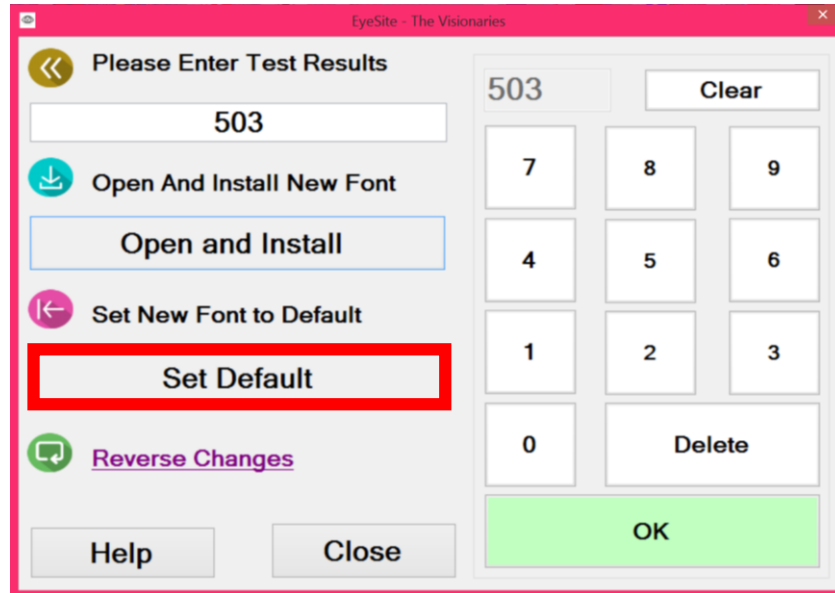

7. The EyeSite installation screen should be open. Please preview your selected EyeSite font and click on the “Install” button.

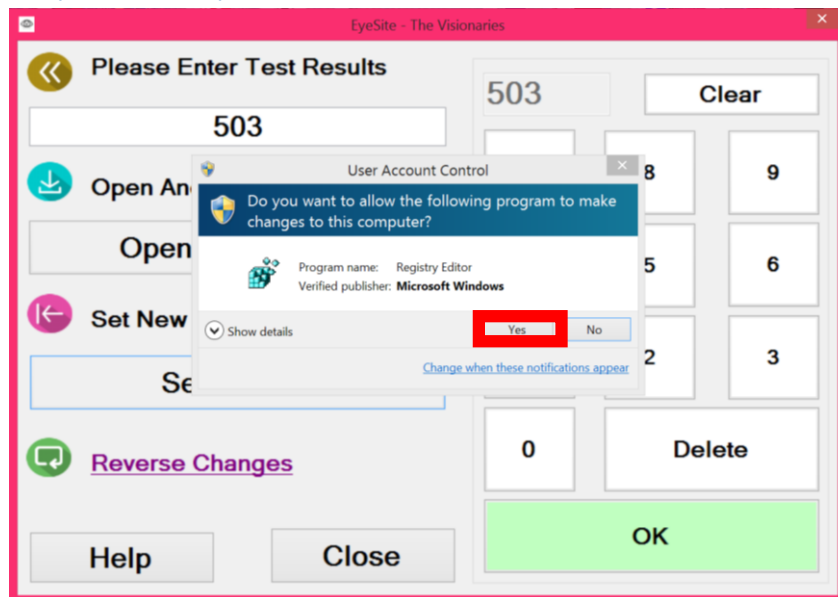

8. After font installation is complete, return to the EyeSite Windows Application. Now, click on the “Set Default” button.

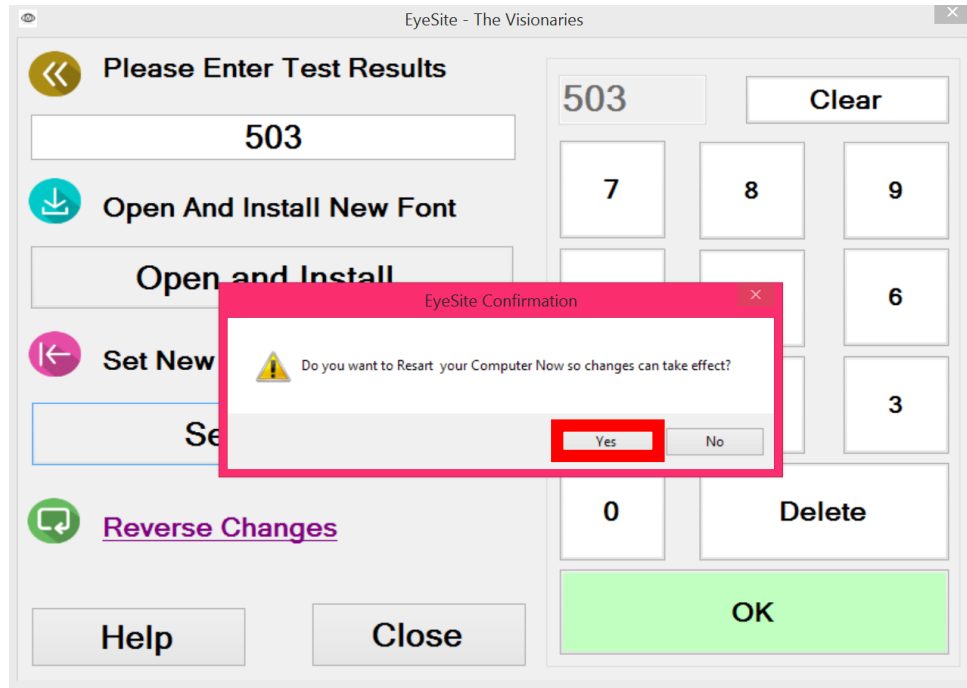

9. This screen will appear. Click “Yes” to authorize the changes being made to your computer.

10. Restart your computer to allow the changes to go into effect.
